Migrating from monolithic architecture to microservices: A Rapid Review

Source: F. Ponce *et al.* "Migrating from monolithic architecture to microservices: A Rapid Review," *Proceedings of the 38th International Conference of the Chilean Computer Science Society (SCCC 2019)*, 2019. [Online]. Available: https://ieeexplore.ieee.org/document/8966423/

Paper Information: Rapid Review

Rating: ⭐ ⭐ ⭐ ⭐

Reading Progress: Was only mentioned by others

Introduction (What is the Paper about?)

- **Rapid Review** on the **migration from monoliths to microservices**
- **Aim:** Gathering, organizing and analyzing migration techniques

Methods

- **Rapid Review**
  - comprised 20 research articles
  - 70% applications web-based
  - more than 90% applications are Java-based

Scientific Benefit

- **Identification of three migration techniques**
  1. *Model-Driven (DD)*
  2. *Static Analysis (SA)*
  3. *Dynamic Analysis (DA)*
- **Case Studies are most widely used for validation** followed by experiments and examples

Challenges / Future Work

Limitations

- Rapid Review provides a rather lightweight methodology to analyze the migration process
  - it may result in reduced coverage
